Wire Products - Container Handles

Container Handles

Products include a wide range of handles designed to meet the demanding specifications of today's packaging industry, with a comprehensive choice of specifications for all forms of plastic and metal containers from 1 – 35 litre. Container Handles are manufactured using top quality galvanised wire from leading European wire suppliers, in wire diameters from 2.15mm – 7mm. Headed, hooked and block ended designs are available, with optional roller grips. A significant proportion of the total output is destined for food use and Siddall & Hilton Products demonstrates a proven ability to meet customer expectations, working within the constraints of food and hygiene regulations to manufacture a product free from contamination.
